Product-focused software engineer and startup co-founder with 3+ years of experience in mobile and web development.

Leading end-to-end product development by combining engineering rigor with user-centric iterative design.

Scaled a cross-platform mobile shuttle tracking app to 2,500+ weekly active users in 4 months.

## SKILLS

---

**Languages:** Dart, TypeScript, Python, HTML, CSS, JavaScript, Java, MATLAB, SQL

**Frameworks and Services:** Flutter, Firebase, Firestore, React, Redux

**Tools and Practices:** Figma, Android Studio, Git, Agile, Scrum, Jira, CI/CD, Linux

**Product and Design:** Wireframing, prototyping, usability testing, user personas, market research

## EXPERIENCE

---

### Trac

Jun 2025 – Present

*Co-founder, Software Engineer*

*Hamilton, ON*

- Built and deployed a real-time mobile shuttle bus tracking system, achieving 2,500+ weekly active users within 4 months, increasing service transparency and rider satisfaction ↗
- Secured and managed a B2B partnership with Attridge Transportation, successfully integrating the system into 5 new shuttle routes across McMaster University ↗
- Designed and developed responsive mobile interfaces in Flutter using Dart, integrating a Firebase backend to handle real-time data synchronization and live geolocation streaming
- Led end-to-end product delivery from scoping to cross-platform production release, translating stakeholder feedback into requirements, iterations, and shipped features

### Ericsson

May 2023 – Aug 2024

*Software Developer Co-op*

*Ottawa, ON*

- Implemented and improved web app features using React, Redux and TypeScript, resolving 30+ accessibility and usability concerns identified in stakeholder reviews
- Optimized 2D CAD data processing by integrating Python OpenCV and Tkinter with data reduction algorithms, reducing floor plan image processing time by 10%
- Designed and iterated on 6 high-fidelity Figma prototypes for an internal web app MVP, incorporating user feedback through 3 design revisions to improve usability
- Led a team of 3 in migrating a MATLAB simulation app to React, delivering a proof of concept 2 weeks early to validate hardware configurations from user-selected parameters

### CGI

May 2022 – Aug 2022

*Software Developer Co-op*

*Remote*

- Refactored Java backend processes in a JSP-based calendar scheduling app to remove the need for managerial event approval, reducing scheduling time by 40%
- Enhanced system feedback by introduced HTML/CSS components to display success messages for ambiguous user actions, resolving customer-reported validation issues
- Improved page load speed by 50% through minimizing redundant API calls when loading webpage data

## EDUCATION

---

### McMaster University

Jun 2025

*Bachelor of Engineering, Software Engineering, Co-op ↗*

*Hamilton, ON*

**GPA:** 3.75/4.0, *summa cum laude*

**Relevant Coursework:** Data Structures and Algorithms, Object-Oriented Programming, Databases, Large Software Architecture and Design, Software Requirements and Testing, Human-Computer Interfaces
